

Advanced Search

Using the advanced search, all of the companies stored in the system can be filtered according to specific criteria or hints. The results can be displayed either via an Excel list or directly in the system.

Various search factors can be entered into the search mask, e.g. catalog versions, parts of company names, street, zip code, status of the classification, etc.

Search

In addition to the "normal search display", there is also the search using the Excel function or export. For the Excel search gives you more search criteria. The search can be refined very much using the various search criteria, and an Excel export can also be carried out afterwards.

Again, all data is in an Excel sheet, provided they are stored in the database. In addition, there is the option of narrowing down the search using certain "criteria". To do this, select the desired catalog version and define the characteristics.
